

HOW TO IMPROVE THE PERFECT CUTTERS

Ideal-tek Tungsten Carbide Cutters, are specially designed for cutting hard metals. Hard wire cutters can be used on single or multiple filars and for lateral or internal cuts. Typical applications include cutting stents, braided mesh, catheters and guide wires in medical device manufacturing.

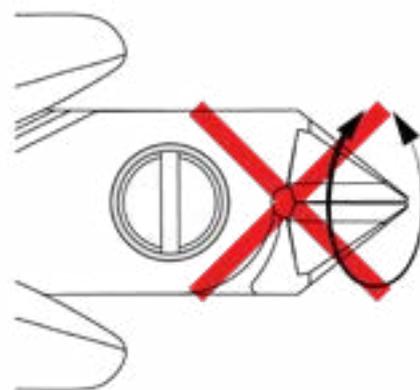

To enhance tool life, we have added a New ANTI-SHOCK system set screw that secures one blade against the other ensuring a flush cut to a given standoff while preventing the blades from colliding or overlapping.

To avoid damaging your Ideal-tek Tungsten Carbide Cutters, please adhere to the following guidelines:

CUTTING WIRE CAPACITY

DO NOT TWIST WHEN CUTTING

For more information, please see [Hard Metal cutter leaflet](#).
